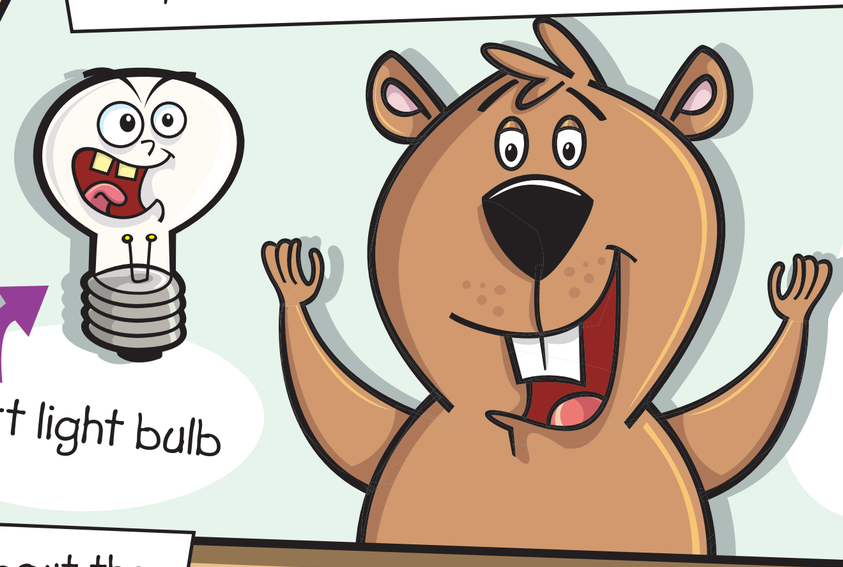
Energy Saver

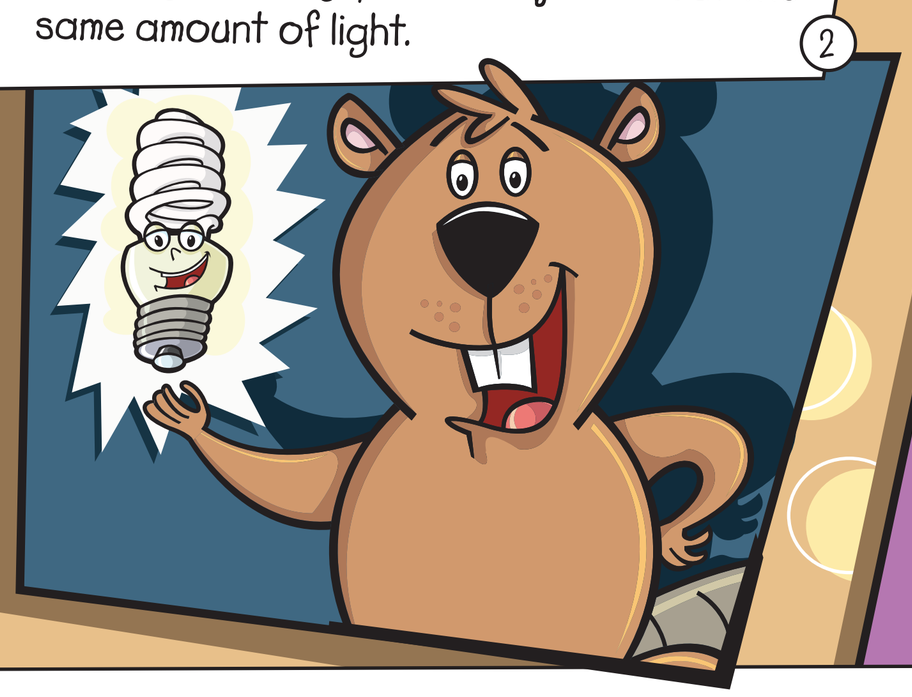
If you take one regular 75-watt light bulb, and replace it with a 15-watt energy saving compact fluorescent light bulb.

1



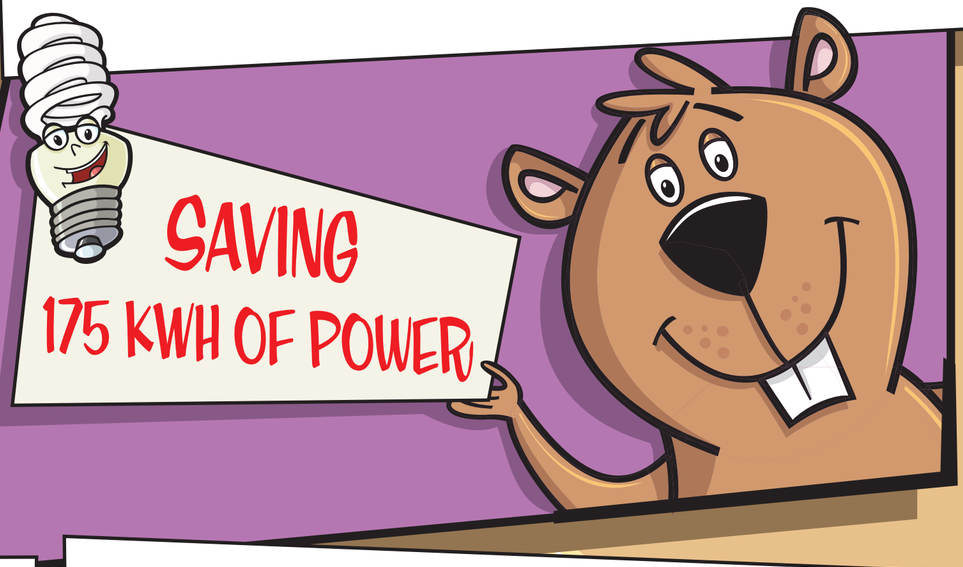
Which by the way, produces just about the same amount of light.

2



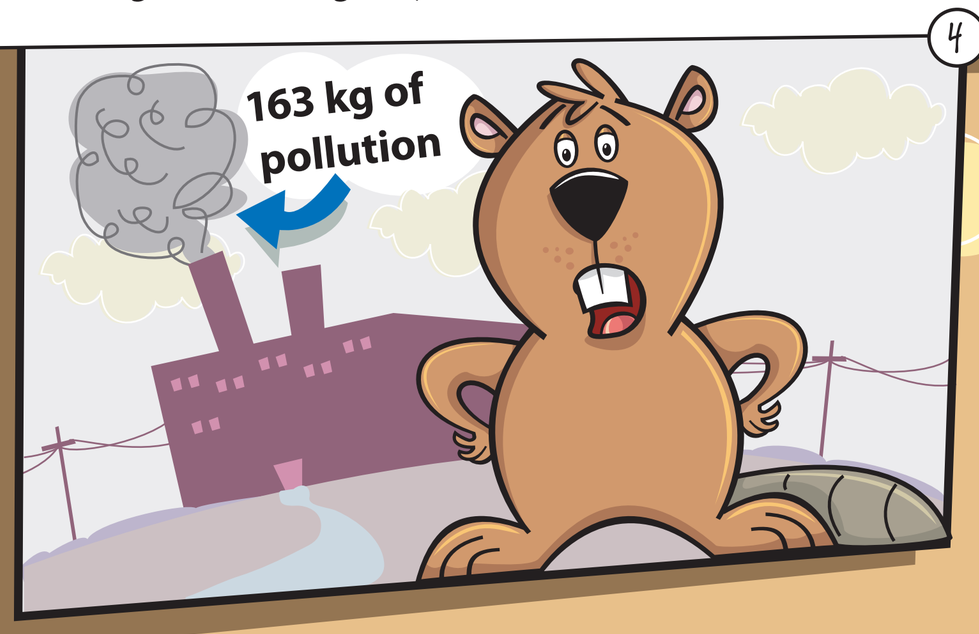
In one year you could save about 175 kWh of power.

3



Now, for every 175kWh of power that's created by burning fuel, 163 kg of pollution is released into the air.

4

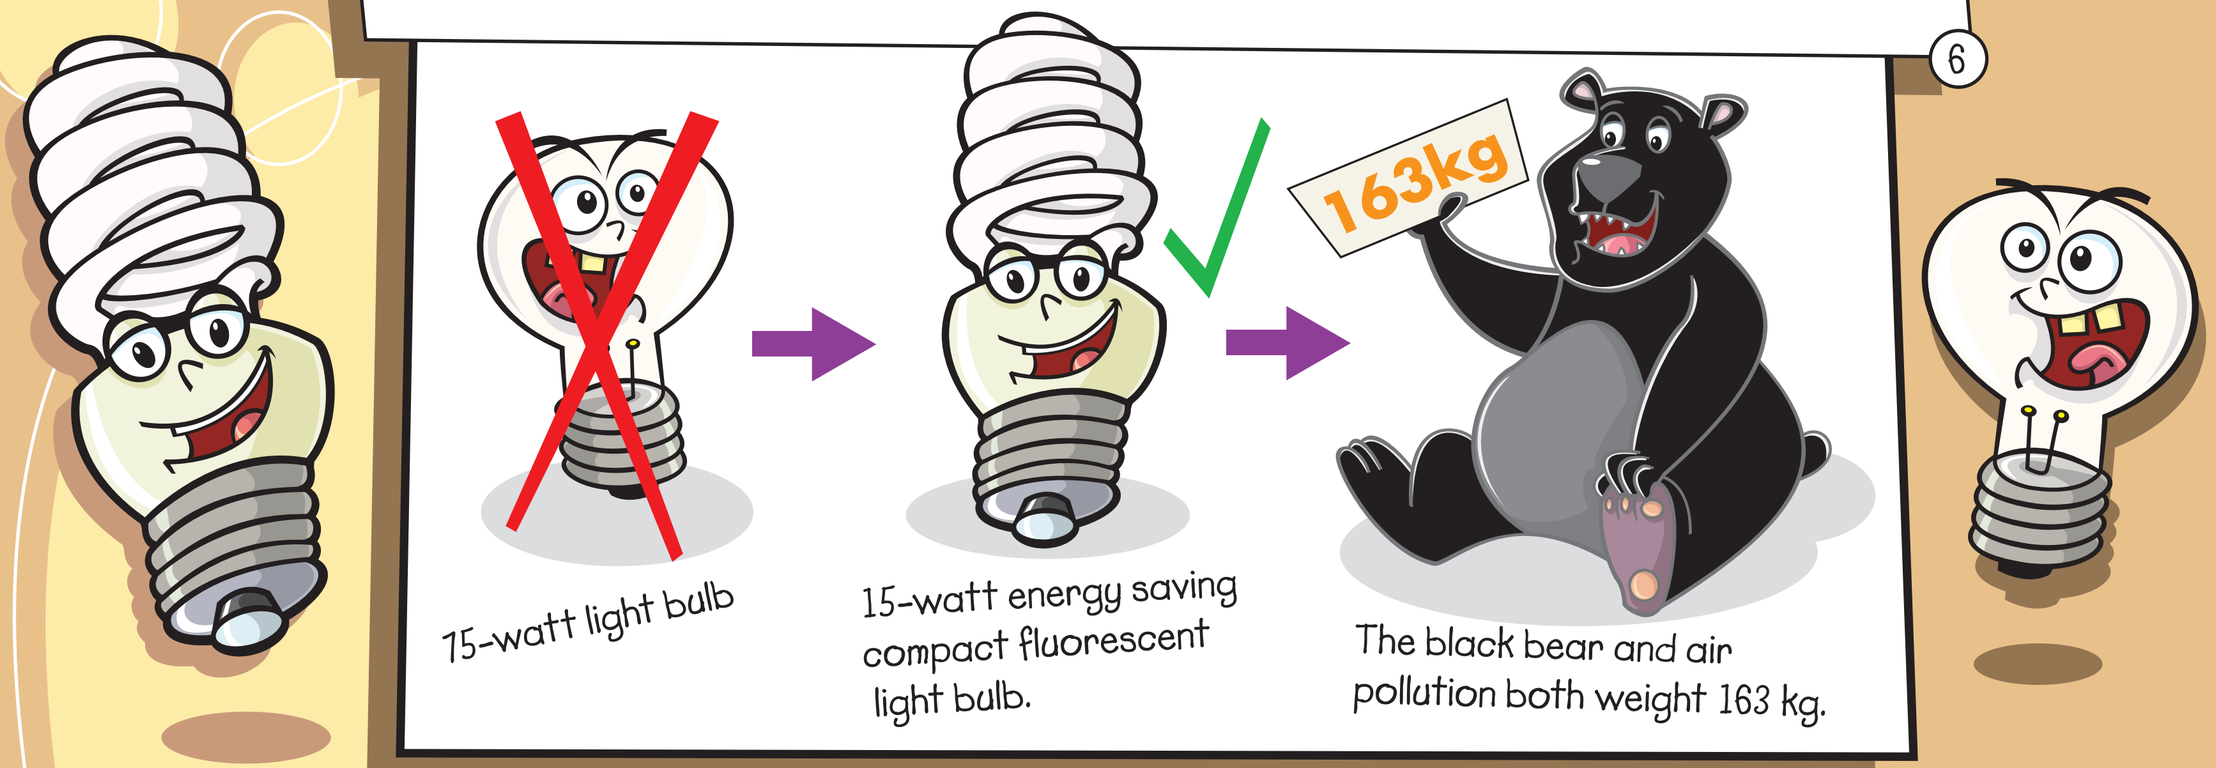


The average black bear in Algonquin Park weighs 163 kg.

5

So by changing just one light bulb, we save the weight of a black bear in air pollution!

6



15-watt light bulb
15-watt energy saving compact fluorescent light bulb.
163kg
The black bear and air pollution both weight 163 kg.
